

the 1990s, the number of people in the world who are illiterate has declined by 100 million.

But the progress is uneven. In the United States, the illiterate population has declined by 10 million. In China, it has declined by 100 million. In India, it has declined by 100 million.

But in Africa, the number of illiterate people has increased by 100 million. In Latin America, it has increased by 100 million. In the Middle East, it has increased by 100 million.

So, while the world has made progress in reducing illiteracy, the progress is uneven. In some parts of the world, the number of illiterate people has increased.

But the progress is uneven. In some parts of the world, the number of illiterate people has increased.

But the progress is uneven. In some parts of the world, the number of illiterate people has increased.

But the progress is uneven. In some parts of the world, the number of illiterate people has increased.
